BATU KAWAN: The Education Ministry is implementing intervention programmes nationwide to encourage students to take up science, technology, engineering and mathematics (STEM) subjects.

Minister Fadhlina Sidek said the interventions were carried out under the education reform agenda to ensure better improvements, especially in the context of STEM subjects.

"That is why programmes like today are very important, where we are roped in by the industry and other stakeholders.

"This is because increasing student participation in STEM activities also involves vocational college students and those in our technical secondary schools, who are studying subjects closely related to technical fields and engineering.
